Elsevier یکی از اولین ناشرانی است که از سال ۱۵۸۰ به چاپ و انتشار مجلات و منابع علمی پرداخته است و هم اکنون یکی از معتبرترین پایگاه های اطلاعات علمی جهان به نام Science Direct را منتشر می-نماید.

Science Direct یک پایگاه اطلاعاتی علمی تمام متن است که شامل تقریباً ۲۵۰۰ مجله علمی، بیش از ۳۰.۰۰۰ کتاب و حدود ۱۳.۳۹۷.۵۶۱ مقاله علمی می-باشد که هر ساله حدود نیم میلیون منبع اطلاعاتی نیز به آن افزوده می-شود و همچنین امکان جستجو و مرور در لیست کتاب-ها، مجلات، آثار مرجع و عکس در این پایگاه وجود دارد.

موضوعات پایگاه Science Direct به چهار دسته اصلی تقسیم می-شود که شامل:

✎ علوم فیزیک و مهندسی

✎ علوم طبیعی

✎ علوم بهداشت و درمان

✎ علوم اجتماعی و علوم انسانی

The screenshot shows the ScienceDirect website. At the top, there is a navigation bar with the ScienceDirect logo, a search bar, and links for Journals & Books, Alizadeh, and Resource Finder. Below the navigation bar, there is a large banner image with a colorful, abstract pattern. A text box on the banner reads: "Gluconeogenesis is the process that leads to the generation of glucose from a variety of sources such as pyruvate, lactate, glycerol, and certain amino acids. Learn about gluconeogenesis >". Below the banner, there is a section titled "Explore scientific, technical, and medical research on ScienceDirect". Under this section, there are links for Physical Sciences and Engineering, Life Sciences, Health Sciences, and Social Sciences and Humanities. The Physical Sciences and Engineering section is expanded, showing a list of sub-fields: Chemical Engineering, Chemistry, Computer Science, Earth and Planetary Sciences, Energy, Engineering, Materials Science, Mathematics, and Physics and Astronomy. To the right of this list, there is a description of the Physical Sciences and Engineering publications, covering a range of disciplines from theoretical to applied. Below this, there are two columns: "Popular Articles" and "Recent Publications". The Popular Articles column lists three articles: "Nanoparticles: Properties, applications and toxicities" (Arabian Journal of Chemistry), "Earth system impacts of the European arrival and Great Dying in the Americas after 1492" (Quaternary Science Reviews), and "School performance, social networking effects, and learning of school children: Evidence of reciprocal relationships in Abu Dhabi" (Telematics and Informatics). The Recent Publications column lists three publications: "Tetrahedron" (Volume 75, Issue 33), "Analytica Chimica Acta" (Volume 1078), and "European Journal of Operational Research" (Volume 279, Issue 3).

☐ Abstract

In the United States, well-child care has the goal of providing comprehensive care to children by addressing developmental, behavioral, psychosocial, and health issues through visits at recommended intervals. The preventive care needs of families can outpace the capacity of clinics and practices to provide it, necessitating a redesign of our well-child care system that aligns the structure of preventive care delivery with the needs of families. Here we focus on 6 questions (the what, when, who, why, how, and where) for well-child care redesign for infants and young children. By addressing these key questions and providing recommendations for advancing well-child care redesign in the clinical and research arenas, we hope to accelerate the process of well-child care redesign. In the current political and socioeconomic environment, continuing with well-child care "as is" is not an option. We propose a redesign of well-child care that is family-centered, evidence-based, and feasible. This redesign will require a shift in the current well-child care model, which is largely provider-driven and clinic-based, to a more family-centered, community-based model. This redesign will require a shift in the current well-child care model, which is largely provider-driven and clinic-based, to a more family-centered, community-based model. This redesign will require a shift in the current well-child care model, which is largely provider-driven and clinic-based, to a more family-centered, community-based model.

Abstract

Heart disease is the most common cause of maternal death in industrialized nations, sudden arrhythmic death, myocardial dysfunction, **coronary disease** and **aortic dissection** being the most frequent underlying causes. Other particularly high-risk conditions include severe valvar stenosis, **mechanical heart valves** and pulmonary arterial hypertension. Pregnancy and **childbirth** exert **physiological stress** on the circulation, so women whose heart condition limits their ability to increase cardiac output are at high risk. Women of childbirth potential who have heart disease should be made aware that pregnancy can carry a high risk, and should be offered safe and
